PROFESSIONAL SUMMARY

Systems Engineer and Full-Stack Developer with 15+ years of overall software experience and strong recent focus on scalable SaaS platforms, modern web applications, backend APIs and AI-enabled solutions. Founder and CTO of Dragon Pyramid, leading product architecture, technical execution, automation initiatives, analytics and data-driven applications.

Hands-on experience with React, Next.js, TypeScript, Node.js, PostgreSQL/Supabase, Docker and API design, combined with practical work in Python/FastAPI, RAG-oriented systems, embeddings, pgvector, semantic search concepts and AI-powered workflows. Experienced in production-grade dashboards, backend foundations, service-oriented architectures, document-processing flows and integration-ready systems.

ROLE FIT - FULL STACK DEVELOPER WITH AI EXPERTISE

- Full Stack profile combining frontend delivery, backend APIs, database design, SaaS architecture and AI-enabled product workflows.
- Hands-on work with Python, FastAPI, PostgreSQL, pgvector, embeddings and RAG-oriented backend foundations.
- Strong React/Next.js/TypeScript experience building responsive dashboards, admin panels and production-ready web interfaces.
- Practical understanding of semantic search, vector-based retrieval, document ingestion concepts and LLM-powered application design.
- Remote contractor experience using Git, GitHub, feature branches, pull requests, technical documentation and Agile coordination.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, Shadcn UI, responsive dashboards, admin panels, component-based architecture

Backend: Python, FastAPI, Node.js, NestJS, Express, REST APIs, authentication, service-oriented architecture, business logic implementation

Databases: PostgreSQL, Supabase, pgvector, SQL Server, MySQL, MongoDB, SQL functions, stored procedures, data modeling, migrations

AI & Data: RAG systems, embeddings, vector databases, semantic search, document processing workflows, LLM-powered applications, dashboards, automation, generative AI integration

Python Tooling: FastAPI, Pydantic, SQLAlchemy, Alembic, uv, Docker-based development workflows

Cloud & DevOps: Docker, Git, GitHub, GitHub Actions, Render, Vercel, Supabase, environment variables, build/start commands, logs, CI/CD workflows

Leadership: Technical team leadership, Scrum/Kanban, documentation, stakeholder communication, mentoring, roadmap execution

PROFESSIONAL EXPERIENCE

Python Backend Developer | RAG & AI Systems - Eduassistant | Apr 2026 - Present | Remote

- Contribute to RAG-LIA, a conversational AI backend designed to support students at risk of academic dropout through intelligent assistance workflows.
- Develop backend services using Python, FastAPI, Docker, PostgreSQL, pgvector, SQLAlchemy and Alembic.
- Implement API foundations, health endpoints, environment configuration, database migrations and modular service structure.
- Work on embedding-generation workflows, vector storage foundations and RAG-oriented architecture for future semantic retrieval capabilities.
- Prepare integration-ready backend services for connection with an external Laravel-based application.

Technical Team Leader - Back Office | LUUI | Apr 2026 - Present | Remote / Ecuador | HealthTech

- Lead the Back Office front for LUUI, a HealthTech platform focused on coordinated care for older adults and operational traceability.
- Coordinate the functional architecture of the administrative web panel: professional validation, care monitoring, reports, support and payment-related processes.
- Contribute to frontend/backend/database alignment, API integration strategy, data model consolidation, documentation and delivery review.
- Work with Next.js, TypeScript, Tailwind CSS, authentication, admin dashboard architecture and team coordination.

Founder & CTO / CEO | Dragon Pyramid | Mar 2020 - Present | Argentina | SaaS, AI & IT Solutions

- Define company vision, product strategy and technical execution for AI, SaaS, automation, analytics and digital transformation solutions.
- Lead the development of GYM MASTER, a multi-tenant SaaS platform for gym management with admin dashboards, member workflows, analytics and AI-driven modules.
- Coordinate frontend, backend and data science contributors using Scrum/Kanban practices, task planning, mentoring, documentation and technical review.
- Research and implement AI, data analytics, automation and integration features for product and client-oriented solutions.

Full-Stack Developer | AED Digital | Apr 2025 - Aug 2025 | Remote / Peru

- Developed a billing and logistics system for retail operations using a service-oriented and PWA-ready approach.
- Implemented features with Next.js 14, TypeScript, Tailwind CSS, Shadcn UI, Supabase, PostgreSQL, Auth and Storage.
- Built offline-first functionality with IndexedDB and automatic synchronization for sales operations in low-connectivity environments.
- Improved user availability and operational continuity through installable PWA behavior and connectivity/synchronization notifications.

Systems Analyst, DBA, Programmer & Project Lead | Honorable Legislature of Tucuman | Nov 2010 - Mar 2020 | Tucuman, Argentina

- Designed, developed and maintained enterprise administrative systems for HR, finance, procurement, records, tax-related processes and internal operations.
- Led multidisciplinary teams using Scrum practices for internal application delivery, maintenance and optimization.
- Administered PostgreSQL, SQL Server and MySQL environments, ensuring data integrity, security, performance and operational reliability.
- Worked with Visual C#, PHP, JavaScript, Visual FoxPro and relational databases across long-term institutional systems.

SELECTED PROJECTS

RAG-LIA / Eduassistant: AI-powered conversational backend focused on academic support and dropout-risk assistance. Built with Python, FastAPI, PostgreSQL, pgvector, SQLAlchemy, Alembic and Docker. Designed around RAG-oriented architecture, embedding-generation services, future semantic retrieval, document-based context and external application integration.

GYM MASTER SaaS: Multi-tenant SaaS platform for gym management, including admin dashboards, member management, attendance workflows, billing-related processes, business analytics and AI-driven modules. Built with Next.js, React, TypeScript, Supabase/PostgreSQL and Tailwind CSS.

LUUI Back Office: HealthTech administrative platform for professional validation, operational monitoring, care tracking, reports, support workflows and administrative traceability. Contributed to technical planning, API integration strategy, database alignment, dashboard architecture and team coordination.

Retail ERP / Logistics PWA: Offline-first billing and logistics system built with Next.js, TypeScript, Supabase, PostgreSQL, Tailwind CSS, Shadcn UI and IndexedDB. Includes automatic synchronization, installable PWA behavior and operational continuity for low-connectivity environments.

80s Forever Digital Platform: Web platform and content-management workflow for a media/streaming brand, including blog publishing, bilingual content, Cloudinary media management, admin-oriented improvements and digital brand infrastructure.

EDUCATION

- Systems Engineer - Universidad Tecnologica Nacional (UTN)
- Diploma in Cybercrime & Digital Forensics - Universidad Tecnologica Nacional (UTN), 2021
- Full Stack Web Developer - Henry Bootcamp, 2024 - 2025
- Professor in Computer Science - Universidad Nacional de Catamarca, 2017 - 2018
- Intensive English Courses - Stratford Instituto Cultural de Lengua Inglesa, 2022 - 2023

CERTIFICATIONS & CONTINUOUS LEARNING

- Venture Finance / Introduction to Startup Finance - SaaS
- Business English, Part 2
- Power BI - Data-driven decision making
- SEO and Content Marketing
- Digital Marketing for Sales Growth

LANGUAGES

Spanish - Native | English - Professional working proficiency / B2-oriented continuous improvement
